Discussion with Bennet Celsa re: reasonable number of working examples for apelin antibodies in method- conclude that the art recognizes the CAM assay and angiostatin a known inhibitor for angiogenesis so that treating angiogenesis with either one of ab208 or ab210 is conceivable and doable. The only quesiton if having gone to the board would be whether Applicants met undue experimentation prong of enablement and written description because only two antibodies shown to work.	2/9/10	LAB
